5.01. Our Earth

- (a) Learn when and how the Earth was formed. Identify where the Earth is located within the universe.
- (b) Draw a labelled diagram showing the structure of the Earth including inner core, outer core, mantle, and crust. Describe what these layers are made of.
- (c) Explain what lines of latitude and longitude are. Define the equator and identify where it is found.
- (d) Learn the names of the continents, oceans, and some important seas. Point these out on a world map.
- (e) Define what a volcano is. Learn about the three types of volcanoes and their differences. Mention two well-known volcanoes and where they are located.
- (f) Understand how and why earthquakes occur. Learn how the intensity of an earthquake is measured.
